

## Coordinate Plane Geometry and Algebra.

Take the seven pictures that I copied for you this week and put each picture on one of these coordinate grid sheets.

Remember, read each point horizontally first and then the second number vertically.

Remember, positive is to the right horizontally and up vertically from the origin (0,0).

Remember, negative is to the left horizontally and down vertically from the origin (0,0).

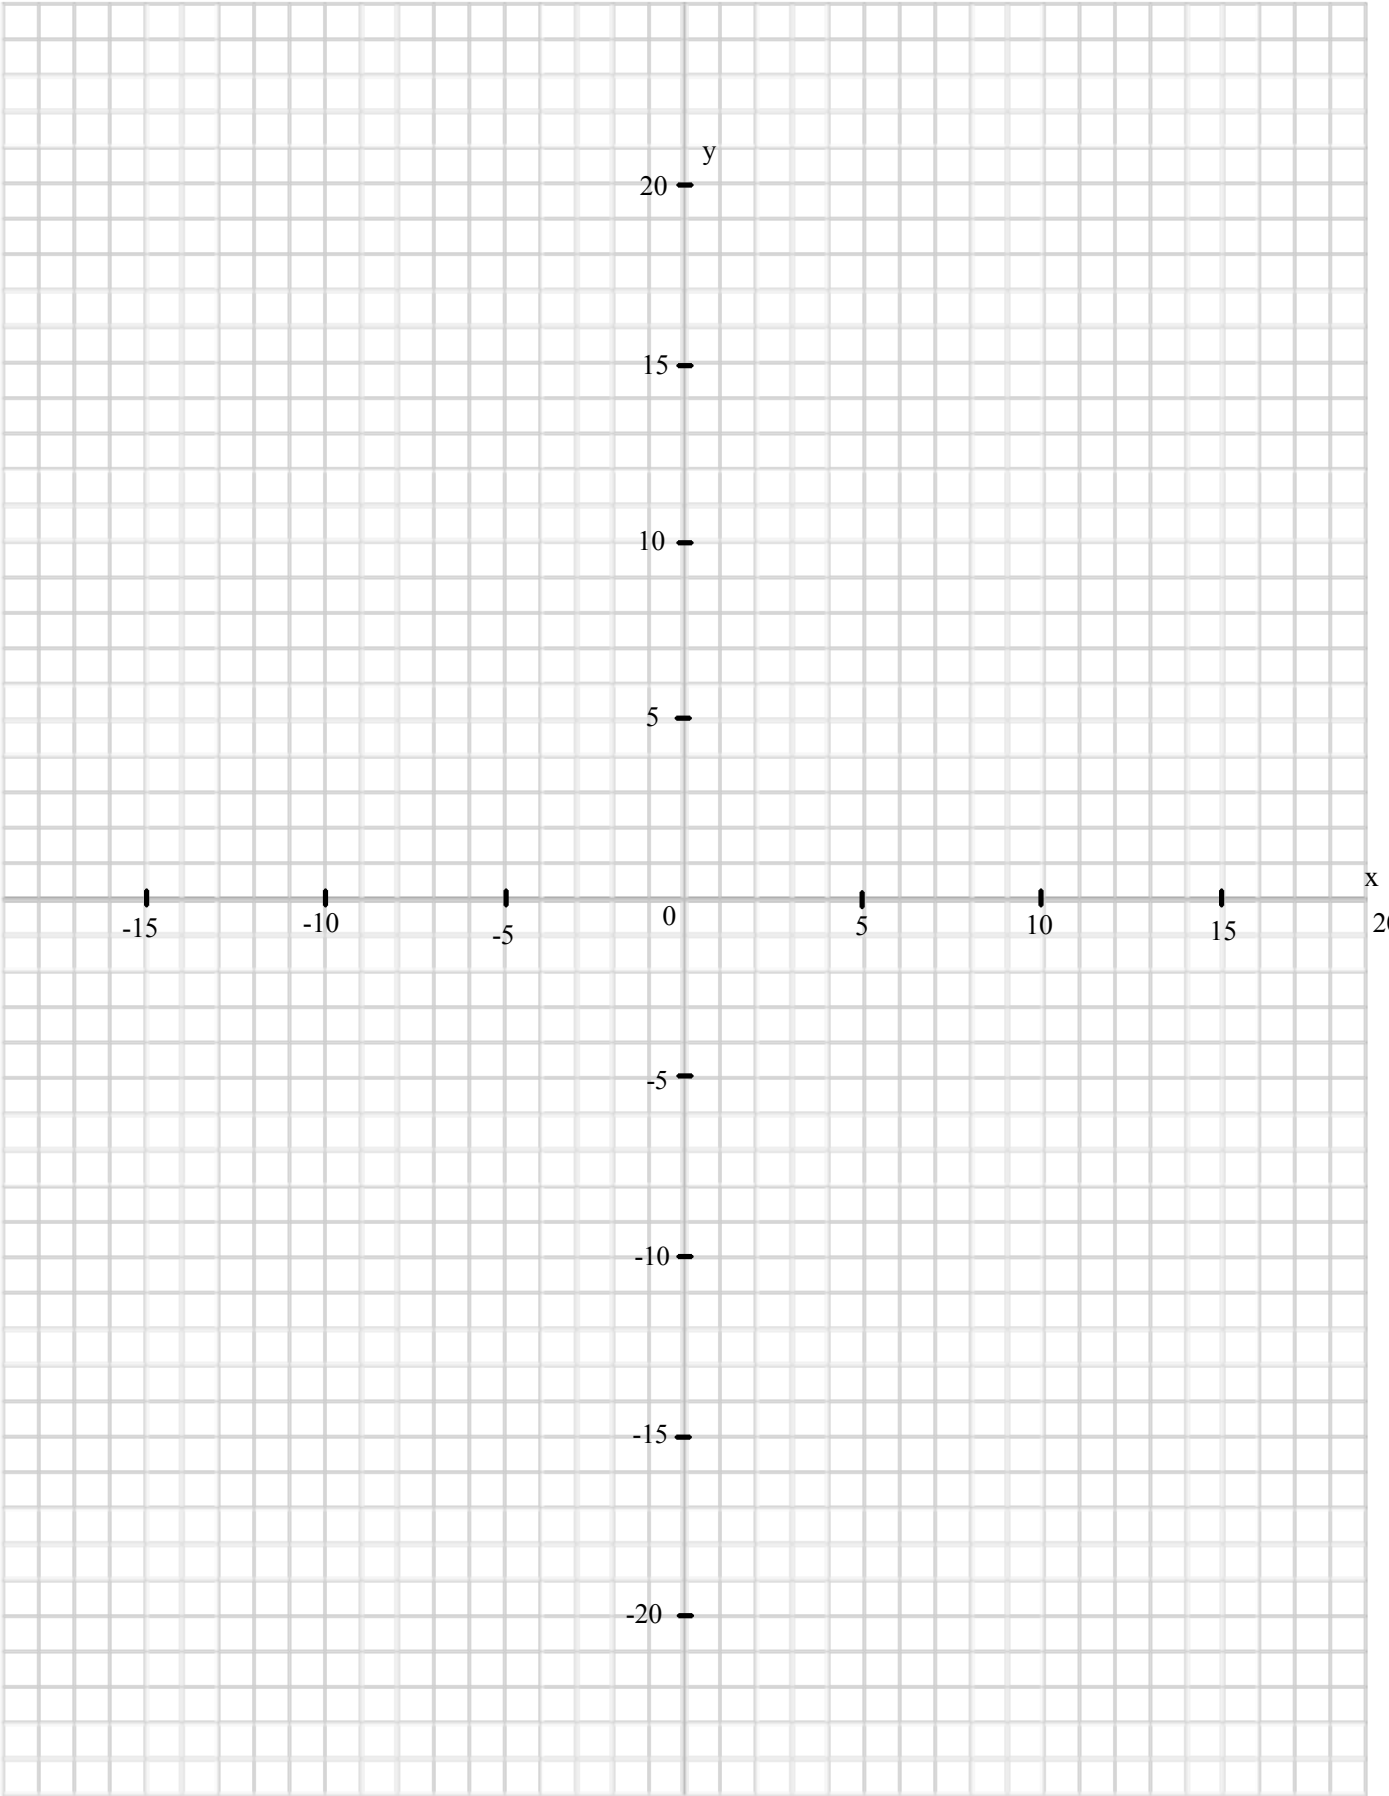

Remember, we call the horizontal axis the "x" axis and the vertical axis the "y" axis.

H comes before V and x comes before y.

You will earn 10 Mathlete dollars for each picture you complete. Please bring these into the next class. If you lose the coordinate point pages I gave you you can get them at <http://sonicwhammy.20fr.com/art.html>

See all 7 pictures on the next page.

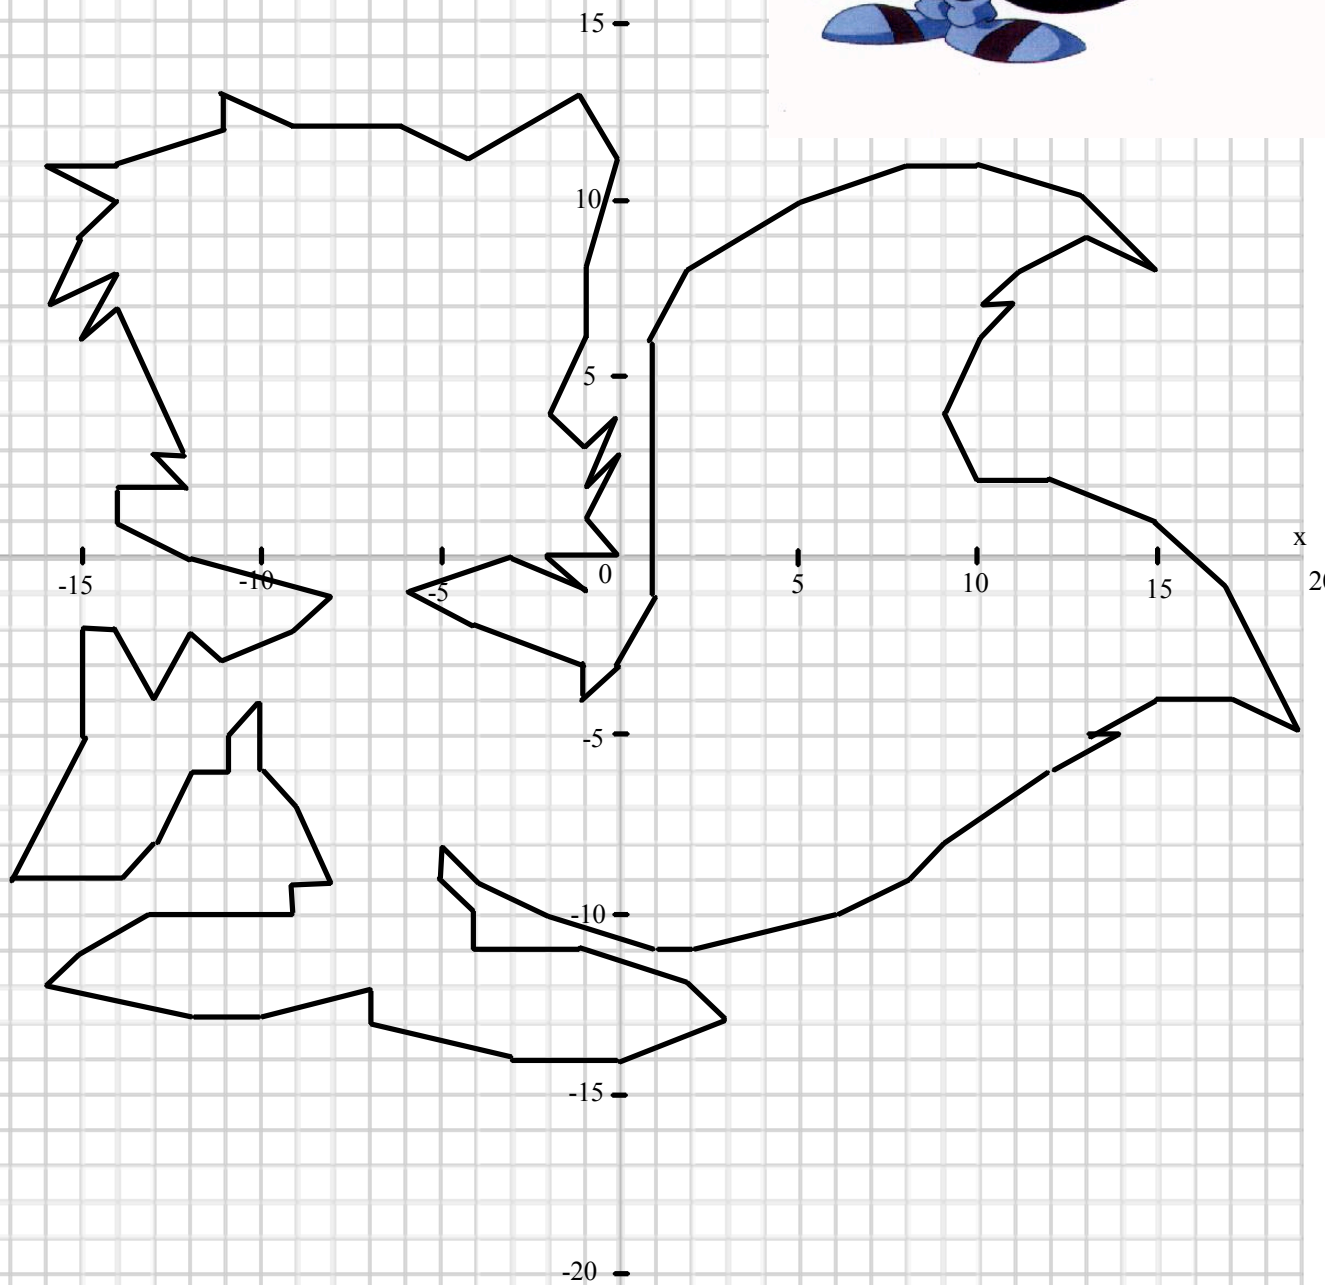

# MILES "TAILS" PROWER

from Sonic the Hedgehog

this is Shape 1 of 39 shapes. Now, start at Shape 2 but do not connect the shapes

# MILES "TAILS" PROWER

from Sonic the Hedgehog --- this is the completed picture after 39 shapes
